J. [3]

of.

A PARANUCLEAR POST-GOLGI NETWORK EARLY ENDOSOMES.
ALTERNATIVE PRODUCTS: AT LEAST 2 AT LEAST 2 ISOFORMS; PC5B/LONG COMPARTMENT IN COMMUNICATION WITH (SHOWN

AND PGSA/SHORT; ARE PRODUCED BY ALTERNATIVE SPLICING.
TISSUE SPECIFICITY: PC5A IS EXPRESSED IN MOST TISSUES BUT IS MOST
ABUNDANT IN THE INTESTINE AND ADRENALS. PC5B IS EXPRESSED IN THE
INTESTINE, ADRENALS AND LUNG BUT NOT IN THE BRAIN.
DEVELOPMENTAL STAGE: WEAKLY EXPRESSED THROUGHOUT THE EMBRYO,
EXCEPT IN THE DEVELOPING NERVOUS SYSTEM, THE RIBS AND THE LIVER,
BUT MARKEDLY UPREGULATED AT DISCRETE SITES DURING DEVELOPMENT.
BUT MARKEDLY UPREGULATED AT DISCRETE SITES DURING DEVELOPMENT.
E5, PROMIXENT EXPRESSION OBSERVED IN DIFFERENCIATED DECIDUA. A
E6.5, PROMIXENT EXPRESSION IN EXTRAEMBRYONIC ENDODERM, AMMION AND A P

E7.5, INTENSE EXPRESSION IN EXTRAEMBRYONIC ENDODERM, AMNION AND NASCENT MESODERM. AT 8.5, ABUNDANT EXPRESSION IN SOMITES AND YOLK SAC FOLLOWED BY A CONTINATION TO DEFMANYOTOME COMPARTMENT BETWEEN E9.5 AND E11.5, ABUNDANT EXPRESSION IN AER (THICKENED ECTODERMAL CELLS OF LIMB BUDS), AT E12.5, EXPRESSION IN THE LIMBS IS CONFINED TO THE CONDENSING MESENCHYM SURROUNDING THE CARTILAGE. AT THIS STAGE, STRONG EXPRESSION ALSO DETECTED IN VERTEBRAL AND FACIAL CARTILAGE PRIMORDIA AND IN THE MUSCLE OF THE INTESTINAL VILLI. ISOFORM A IS MOST ABUNDANT AT ALL STAGES BUT SIGNIFICANT LEVELS OF ISOFORM B OCCUR AT E12.5.

10 CHAIN. THE PROPEPTIDE DOMAIN ACTS AS AN INTRAMOLECULAR CHAPERONE ASSISTING THE FOLDING OF THE ZYMOGEN WITHIN THE ENDOPLASMIC RETICULUM.

11 DOMAIN: AC 1 AND AC 2 (CLUSTERS OF ACIDIC AMINO ACIDS) CONTAIN SORTING PROTEIN PACS-1.

SIMILARITY: BELONGS TO PEPTIDASE FAMILY SB.

11 SIMILARITY: CONTAINS 1 HOMO B/P DOMAIN.

SUBCELULAR LOCATION: Integral membrane protein.

BUELDPHENIAL STAGE: First detected at E6. Predominantly expressed in the developing CNS, the emerging dorsal root ganglia and cranial ganglia. In the CNS, expression is uniform along the rostrocaudal axis. During gastrulation, it is expressed in the vicinity of the primitive streak, and becomes predominant in that area at late gastrulation. At E10, detected in ventricular zones (VZ), but not in marginal zones (WZ), and weakly in other structures. Between E12 and E15, a high expression is present in
                                                                                                                                                                                                                 the VZ in all brain areas. No expression in differenciated neuronal fields. In the newborn and postnatal stages, expression

CATALYTIC ACTIVITY: Release of mature proteins from their proproteins by cleavage of Arg-Xaa-Yaa-Arg-|-Zaa bonds, where can be any amino acid and Yaa is Arg or Lys. Releases albumin, complement component C3 and von Willebrand factor from their respective precursors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ENDOPROTEASE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Xaa
